High quality early care and education

- Improves academic and health outcomes for children
- Reduces public costs
- Strengthens the economy

Yet only 13% of children under the age of five participate in publicly-funded high quality early care and education programs.

**Our Priorities**

**Increase access to high-quality early care and education services**

- Build supply for diverse, quality programs
- Make services available to at-risk families

**Make government work better for families and providers**

- 50% reduction in paperwork for families to re-determine eligibility for Child Care Works
- 80% reduction in steps for families to search for early learning programs online
- 66% reduction in paperwork for early learning professionals to apply for Rising STARS Tuition Assistance

**Looking ahead**

- Keystone STARS Re-visioning
- Aligning OCDEL Services

Revised: March 1, 2017
Evidence-Based Home Visiting Family Support Programs have a family-centered focus, strength-based approach that works with both the child and parent. Studies of various home visiting programs have shown positive impacts on children’s cognitive development and behavior, higher grade point averages and achievement scores at age nine, and higher graduation rates from high school. Ninety-six percent of children screened who participated in a Maternal Infant Early Childhood Home Visiting (MIECHV)-funded program in Pennsylvania in FFY 2015-16 showed at least age-appropriate development in general cognitive and communications skills after 18 months in the program. In 2015-16, 17,955 infants and toddlers received services through Nurse-Family Partnership, Early Head Start, Healthy Families America, or Parents as Teachers through local, state and federal funding.

Early Intervention serves young children with disabilities/developmental delays and their families. Early Intervention builds upon the natural learning occurring in a child’s early years and promotes collaboration among parents, service providers, early childhood educators, and others involved in the child’s life. Seventy-eight percent of infants/toddlers and 89 percent of preschoolers receiving Early Intervention services made more progress towards acquisition and use of knowledge skills than anticipated through typical development alone in 2015-16. Approximately 38,000 children received birth to three early intervention services and 52,811 children received preschool early intervention services in 2015-16.

Through Child Care Certification, the Department of Human Services regulates family child care homes, group child care, and child care centers to ensure they provide safe child care. There were approximately 7,500 regulated child care programs in December 2016.

Child Care Works provides low-income working families with access to child care, making them more likely to retain employment and be more productive at work. Families must provide documentation that they meet work and educational requirements for eligibility. More than half (56 percent) of children receiving Child Care Works were enrolled in a Keystone STARS program in June 2016. More than 129,000 children from birth – school age received Child Care Works in June 2016.

Keystone STARS provides families a tool to gauge the quality of early care and education programs and is proven to increase the quality of child care based on an independent study. Child care and Head Start programs earn a STAR 1 to STAR 4 level by meeting quality standards for teacher qualifications, learning environment, and program management. After participating in high-quality, Keystone STAR 3 and 4 programs, the percentage of four-year olds with proficient academic and social skills doubled to 81 percent in 2012-13. Approximately 166,000 children from birth through school-age were served in Keystone STARS in 2015-16.

Pennsylvania Pre-K Counts provides high quality pre-kindergarten education for at-risk three- and four-year olds in Pennsylvania. The percentage of four-year-olds with proficient academic and social skills tripled to 82 percent after participating in Pre-K Counts programs in 2012-13. In 2015-16, approximately 17,115 children were served in Pennsylvania Pre-K Counts.

Head Start provides comprehensive early learning services to at-risk children and families, prioritizing enrollment to families at 100 percent of the Federal Poverty Level or other categorical eligibility criteria. In addition to educational programming, Head Start offers health/nutrition services, support to families, and a strong parent involvement component. The percentage of four-year-olds with proficient academic and social skills more than tripled to 76 percent after participating in Head Start Supplemental Assistance Programs in 2012-13. In fact, there was a six-fold increase in the percentage of children with proficient mathematical thinking skills. In 2015-16, 33,214 children received Head Start services through state and federal funding.

2 323 families surveyed, FY 2015
3 Parents as Teachers (PAT) serves children up to kindergarten entry. 3,703 from three to kindergarten age received PAT services in 2015-16.
