PA Position Statements for the ECERS-3

These position statements are the result of the need to consider the impact of Pennsylvania Department of Human Services (DHS) Certification Regulations and other Pennsylvania program specific expectations on the scoring of the items in the ECERS-3 scale. In the case of each statement input from multiple sources including the ECERS-3 scale authors, DHS Certification, OCDEL and other experts were considered in the creation of the statement.

General PA Position Statement:
The ECERS-3 will be the assessment tool in classrooms/groups where the majority of the children are preschool age (37 months through the date the child enters kindergarten). All classrooms operated by the facility, including those not certified under DHS or dually certified (such as, but not limited to, Department of Education, Federal Head Start and Nursery school classrooms) are considered for an ERS assessment. In classrooms of mixed ages, the assessment tool will be determined by the age level that represents the highest number of enrolled children in the group: Infant/toddler; Preschool; or School-Age.

ECERS-3 may also be used in:

- Group day care homes which are not located in a residence and only serve children 37 months through entrance into kindergarten.
- Group day care homes which are not located in a residence, physically separate children into age-based groupings (i.e., separate classrooms) and children 37 months through entrance into kindergarten represent the highest number of enrolled children in the program.

<td>General PA Position Statement regarding hand washing and use of hand sanitizers.</td>
<td>Child and adult hand washing is required by regulation before meals and snacks, after toileting and diapering, and when the hands are visibly soiled. The use of a hand sanitizer is not a substitute for hand washing in these instances. Hand sanitizers may be used with children ages 24 months and older for hand washing unrelated to meals/snacks, toileting/diapering and when not visibly soiled (such as after blowing noses, before sensory play, and other times hand washing is expected in the Environment Rating Scales) The program must follow the guidelines below when using hand sanitizer: • Read the label before using a hand sanitizer. If the instructions on the hand sanitizer prohibit its use for children, the hand sanitizer should not be in the facility. Also, note any age restrictions on the label and follow those restrictions. At all times, follow the directions on the product label. • The provider must obtain written parental permission for a child to use a hand sanitizer prior to permitting a child to use a hand sanitizer. The signed parental permission must be kept on file in the child’s record at the facility. • Hand sanitizers must be inaccessible to children when not in immediate use. • A staff person must be physically present with and directly supervising a child who is using a hand sanitizer. The staff person must remain with the child until the hand sanitizer has dried on the child’s hands. The steps for using a hand sanitizer are as follows: 1. Apply an appropriate amount of the product to the palm of one hand (refer to the directions on the label of the hand sanitizer). 2. Rub hands together. 3. Rub the product over all surfaces of hands and fingers until hands are dry.</td>

Pennsylvania Early Learning Keys to Quality
## Changing Diapers, Pull-ups and Soiled Underwear

The following guidelines are for use in child care centers, group homes and family day care homes where diapering and toilet training occurs. The ERS Authors, Caring for Our Children 3rd Edition Standards, DHS Certification Regulations and ECELS guidance were used in the creation of this document.

### Hand Washing Procedure:

1. Moisten hands with water and use liquid soap
2. Rub hands together away from water for 20 seconds
3. Rinse hands free of soap under running water
4. Leaving water running, dry hands with a clean paper towel or an air blower
5. Turn off faucet using paper towel
6. Throw the used paper towel into a hands-free trash can

### Soiled/Wet Diapers*

1. Adult washes their hands. (Only expected if, prior to changing the diaper, pull up or underwear, it is checked by reaching into it to see if a change is needed)
2. Gather all supplies for the diaper change and place on or near the changing surface above the child’s head. (Enough wipes for the process removed from container, clean diaper, a plastic for soiled clothing, and clean clothes if needed) If used: disposable gloves, dab of diaper cream on disposable towel, changing table paper (enough to reach from child’s shoulders to their feet)
3. Place the child on the changing table and remove clothing to access diaper keeping the clothing out of the contaminated area. Never leave the child unattended on a changing table or countertop. If clothing is soiled place in a plastic bag to send home.
4. Unfasten the diaper leaving it under the child for the wiping steps or place the soiled diaper directly into the lined hands-free trash can. 
5. Use wipes to clean child’s bottom from front to back and place inside the soiled diaper or directly into a lined, hands-free covered trash can. Use each wipe for only one swipe.
6. If the soiled diaper was left under the child for the wipe step, fold the soiled surface of the diaper inward over the used wipes and place the bundle in the trash can. If gloves were used, discard them now into the same trash can.
7. Use a wipe to remove soil from your hands and throw it in the trash can. Use another wipe to remove soil from the child’s hands and throw it in the trash can.
8. If paper liner was used, check for soil under the child and fold paper up from the child’s feet to cover the area and create a clean surface under child’s bottom.
9. Put on the clean diaper and diaper cream if needed and redress the child.
10. Wash the child’s hands and return them to the group without touching other surfaces. Store bagged, soiled clothing for parents in an area inaccessible to children.
11. Dispose of paper liner in trash can if used. Clean visible soil from changing table and disinfect the surface with bleach/water solution or an EPA approved product according to directions.
12. Adult washes hands. Record the change in the child’s log.

### Soiled/Wet Pull-ups and Underwear* 

2. Gather supplies for the change process and place on or near the changing surface outside the contaminated area. (Enough wipes for the process removed from container, clean pull up or underwear, clean clothes and a plastic bag for soiled clothing if needed) If used: Paper liner (large enough to stand on and fold over if needed), disposable gloves
3. Consider whether to change the child lying down or standing up. (If child will be changed lying down follow the procedure for diapers)
4. If using paper liner, have child stand on paper.
5. To avoid contamination of clean shoes, socks and clothing, remove unsoiled clothing and set aside. (If the child’s shirt is clean it is helpful to have them hold their shirt up above their waist during the change.)
6. Remove soiled clothing and place in a plastic bag to send home. If a pull-up was used, remove by pulling the sides apart and discard it in a lined, hands-free covered trash can. If underwear was used remove from the child doing your best to avoid contamination of surfaces and place with clothes in the bag.
7. If paper liner was used check for soil around the child and fold paper over if needed so there is a clean surface to stand on.
8. Clean the child’s skin around their pull-up/underwear area, wiping from front to back using each wipe for only one swipe. Place each used wipe in the trash can. Discard gloves (if used) in the trash can.
9. Use a wipe to remove soil from your hands and throw it in the trash can. Use another wipe to remove soil from the child’s hands and throw it in the trash can.
10. Assist the child, as needed, in putting on a clean pull-up or underwear and getting re-dressed, including socks and shoes. Supervise the washing of the child’s hands and their return to the group without touching other surfaces.
11. Store bagged, soiled clothing for parents in an area inaccessible to children. Dispose of paper liner in trash can if used. Clean visible soil from changing area and disinfect the surface with bleach/water or an EPA approved product according to directions.
12. Adult washes hands. Record the change in the child’s log.

*Note: All changes must be completed on a surface that can be disinfected after use. Because changing a child from the floor level or on a chair puts the adult in an awkward position and increases the risk of contamination, it is recommended that a changing table be used when possible. (CFOC, 3rd Edition).
